

Enterprise Services

Services	Description
Enterprise End-To-End Deployment Services	Full turnkey solutions based on customer requirements from procurement to configuration.
Storage Management	Report on the health status of critical applications, such as Endpoint Management, VPN, Endpoint Protection, or Data Protection.
Storage and Server Installation and Migration	Comprises of storage hardware installation and migration of data.
Tape Library Support	Tape library installation and migration of data
SAN Storage Support	A Storage Area Network (SAN) is a specialized, high-speed network that provides block-level network access to storage. SANs are typically composed of hosts, switches, storage elements, and storage devices that are interconnected using a variety of technologies, topologies, and protocols.
Storage Management services	Storage management is a broad concept, which includes techniques, software, processes that aim at improving the performance, availability, recoverability, and capacity of the storage resources.
Backup and recovery management	Backup and recovery describes the process of creating and storing copies of data that can be used to protect organizations against data loss. Recovery from a backup typically involves restoring the data to the original location, or to an alternate location where it can be used in place of the lost or damaged data.
Firmware and software upgrades	Firmware is a software program or set of instructions programmed on a hardware device. Sometimes manufacturers release firmware updates that simply make their devices work more efficiently.
