

Virtualization Services

Services	Description
Virtualization Management	<p>Monitoring the following elements: Creation, deletion and modification of virtual machines, virtual networks and/or the entire virtualization infrastructure. Ensures that all virtual machine software / hypervisors are up to date along with the installed OS and/or application. Establish and maintain network connectivity / interconnectivity across the virtualization environment. Monitor and manage performance of each virtual machine and/or virtualization environment in whole.</p>
Virtualization Services	<p>Virtualization is enabling a fundamental change in how enterprises manage, deploy and deliver IT. Our Virtualization Services enable customers to maximize their IT infrastructure utilization with lower Total Cost of Ownership (TCO) using industry standard virtualization software and services.</p> <p>Examples of virtualizations:</p> <ul style="list-style-type: none">Server VirtualizationStorage VirtualizationApplication VirtualizationHosted Desktop VirtualizationDesktop Virtualization
